

# Ulster County Emergency Communications/ Emergency Management

## United States Geological Survey Stream Gauge Locations

Stream gauges indicate water levels and serve as an indicator of drought or flooding. With increasing fluctuation in weather patterns, more gauges are needed for placement throughout the County. Additionally, sites that exist but are not maintained and/or are not technologically updated, should be reactivated and updated.

Emergency management and services personnel, as well as citizens, can access daily water level readings from the following websites:

<http://ny.waterdata.usgs.gov>  
<http://www.ci.nyc.ny.us>
